Donald A. Bach  
Vice President, Chemical Division  
Norweco Wastewater Equipment Company  
220 Republic Street  
Norwalk, OH 44857-1196

Dear Mr. Bach:

This letter confirms that the International Rural Water Association has tested and recommends for use, Norweco's Bio-Dynamic® Potable Water Disinfection System.

The Norweco Bio-Dynamic® system has been thoroughly evaluated at the South Putnam Public Service District potable water treatment plant in Scott Depot, West Virginia, USA, and in several field installations in Honduras and El Salvador in Central America. In all controlled and uncontrolled installations, the Bio-Dynamic® Potable Water Disinfection System was easily installed, required very low maintenance, and provided a flow rate proportional chlorine dose.

The International Rural Water Association believes that the Norweco Bio-Dynamic® Potable Water Disinfection System is a fully acceptable means to disinfect emergency or rural water sources and recommends its use.

Sincerely,

Fred D. Stottlemeyer  
President
